Backend developer with experience in process automation (RPA) and API development. Currently automating operational workflows in a corporate environment using UiPath including UiPath Apps integrated with Data Fabric and queue-orchestrated processing with a focus on reducing manual tasks and optimizing internal processes. This is complemented by solid experience building REST APIs and microservices with NestJS, database design with MySQL and PostgreSQL, asynchronous messaging (RabbitMQ, NATS, Redis), and predictive modeling with Python (pandas, scikit-learn). Looking to keep growing toward full-stack development and system integration at scale.

PROFESSIONAL EXPERIENCE

LIVERPOOL

RPA Intern

Santa Fe, Mexico City

October 2025 – Present

- Designed, developed, and implemented robotic process automation (RPA) flows with UiPath, gathering requirements with internal teams and translating manual processes into robust, scalable solutions.
- Built a UiPath Apps application to manage the store account statement clarification process, integrated with UiPath Data Fabric, automating a previously 100% manual workflow.
- Implemented queue-orchestrated processing, distributing work across robots to scale execution and improve resilience against failures.
- Optimized existing production processes, improving execution times and reducing errors from repetitive tasks, in direct collaboration with business areas.

IACSITEC

Software Development Intern

Remote

April 2025 – August 2025

- Fixed and maintained code in existing codebases, resolving bugs and improving project stability.
- Created installation packages to distribute projects internally across teams and machines, standardizing the deployment process.
- Contributed to internal API design, collaborating on endpoint definitions and service contracts.
- Reviewed and audited Dockerfile security: identified issues such as containers running as root, excessive permissions, and unpinned or insecure base image versions, proposing fixes aligned with secure containerization best practices.

PROJECT EXPERIENCE

IsVerceo (PaaS Platform)

Backend Developer / DevOps

- Designed and developed a PaaS platform to automate agile application deployment, reducing manual intervention in deployment processes.
- Built a microservices architecture with NestJS, focused on scalability and maintainability.
- Containerized services with Docker for environment isolation and portability.
- Configured reverse proxy and dynamic routing with Traefik to manage traffic between services.

E-commerce

Full-Stack Developer

- Built an end-to-end application with React, NestJS, and MySQL, including PDF invoice generation.
- Modeled and normalized the database with transaction support to ensure data consistency across purchase operations.
- Implemented a role-based system and full order flow management (cart, checkout, order details).

EDUCATION

TECNOLÓGICO DE ESTUDIOS SUPERIORES DE JILOTEPEC (TESJI)

B.S. in Computer Systems Engineering

Jilotepec, State of Mexico

2022 – 9th semester (Current)

COLEGIO DE ESTUDIOS CIENTIFICOS y TECNOLOGICOS DEL ESTADO DE MÉXICO (CECyTEM)

Computer Technician

Jilotepec, State of Mexico

2019 – 2022

TECHNICAL SKILLS

Automation & RPA: UiPath, UiPath Apps, Data Fabric, automation flow design

Languages & Frameworks: Python, JavaScript, TypeScript, NestJS, React

Backend: REST APIs, Microservices, API Gateway

Messaging & Streaming: RabbitMQ, NATS, Redis

Databases: MySQL, PostgreSQL, PrismaORM

Machine Learning: pandas, NumPy, Matplotlib, scikit-learn

Frontend: React, Tailwind CSS

Tools: Git, Docker, Docker Compose, Kubernetes with Helm (Services, Deployments)

Currently learning: AWS (EC2, S3, Lambda, ALB/ELB, IAM) — fundamentals in progress

SOFT SKILLS

- **English: Intermediate B2**
- **Spanish: Native**
- **Leadership**
- **Team workflow organization and management**
- **Effective collaboration and communication**
